

STELLAR® 20,000 LB. HOOKLIFT TECHNICAL SPECIFICATION GUIDE

STELLAR® 20,000 LB. CAPACITY HOOKLIFT HOIST

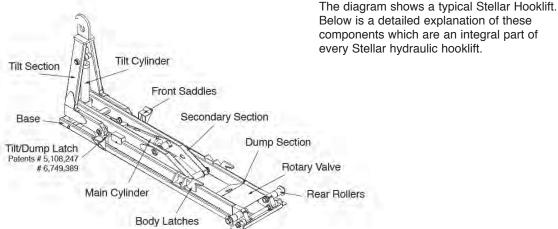

SPECIFICATION INFORMATION

- Will accommodate bodies from 11-feet up to 21.5-feet long and still retain the maximum rated dump angle on a 41-inch high frame truck. Longer bodies may be accommodated with reduced dumping capabilities.
- Transmission-mounted PTO and hydraulic pump required to power the hooklift.
- Standard in-cab manual controls which allow for precise metering of the manual hydraulic valve. Solenoid-activated hydraulic control valve with electric remote control pendant is optional.
- Ten (10) gallon frame-mounted oil tank.
- · Operating pressure is 4,200 psi.
- Hydraulic flow required is 15-gallons per minute.
- Patented dump/load interface on double pivot models.
- · Hydraulic locks to prevent cylinder collapse in case of hose failure.
- Hook latch to prevent body from becoming detached prematurely.
- · Mechanical rear body tie-down latches.
- · Resettable dump/tilt tabs.
- Hydraulic rotary valve to prevent front tilt movement when the dump frame is raised.
- · Permanently lubricated and greasable bushings used throughout.
- Carbon steel and zinc plated or type 17-4 stainless steel pins used throughout.
- All weldments painted with two-part polyurethane enamel.

KEY FEATURES

Base Section:

Body Latches

The base section of a Stellar Hooklift may also be called a sub-frame. All Stellar Hooklift hoists are tied together in one common framework. This base section not only adds strength to the hoist, but it places less stress concentration on the truck chassis than hook hoists without a common base. The base section

also provides for a simple installation on most truck chassis.

Body Latch: The body latch is also referred to as the rear tie-down. Standard on Stellar Hooklift hoists are the rearward

facing hooks that interface with a horizontal steel pocket or tab. As the body is pulled forward into the final storage position prior to transporting, the tabs will pull tight in the hook pockets. Hydraulic activated rear

tie-downs are optional on larger Stellar Hooklift hoists.

Dump Section: This component of the Stellar Hooklift pivots at the rear of the hoist when interacting with the patented

tabs on the tilt section. The rear body latches are attached to this component on most models. This allows

the body to remain in the latches when dumping.

Front Saddles: Front saddles provide a place for the body to rest while the truck is in motion.

Lift Cylinder: The lift cylinder on a Stellar Hooklift not only lifts the body onto the truck, but it also provides the dumping

movement. All Stellar Hooklift lift cylinders feature dual pilot-operated counterbalance valves which provide

for optimum meter-ability and protection against sudden movement in the case of hose failure.

Tilt/Dump Latch: This unique patented feature is the basis of the Stellar Hooklift system. With a simple mechanical

interference between the tilt section and the dump section, the pivot point is changed from the secondary section (loading/off-loading) to the rear of the truck (dumping). Resettable tabs protect the system from

out-of-sequence operation.

Rear Rollers: With the unique Stellar Hooklift design, bodies are loaded and unloaded with a "lift and roll" movement.

While unloading a body, the tilt section will lift the front of the body and roll it back. The tilt cylinder will

continue rolling the body until the rear of the body contacts the ground.

Rotary Valve: The rotary valve will lock out all hydraulic fluid to the tilt cylinder when in the dumping mode. This prevents

the accidental release of the body while dumping.

Secondary Section: The secondary section acts as the main pivoting member for loading / off-loading bodies. This component

ties the tilt, dump and base sections together into one cohesive unit.

Tilt Cylinder: The tilt cylinder operates the tilt section of the Stellar Hooklift. This cylinder features a pilot-operated

counterbalance valve on both extend and retract sides. The tilt section is a key component of the Stellar Hooklift. The tilt section provides the selection of dump or load/off-load. With Stellar's unique twin post

design, line-of-sight visibility of the hook is available from the truck cab.

■ Stellar® Hooklift Reference Chart*

<u>Model</u>	Lift Capacity	Body Lengths	Cab-To-Axle (Trunnion)	Hook Height
Flex36 60-8	Up to 9,000 (4,082 kg)	8-9 (2,438-2,743 mm)	60 (1,524 mm)	35.63 (905 mm)
