

For All Your Tarping Needs

Flap Tarp

Double Lock Stitching
For added strength and durability.

Reinforced Edges
Mesh tarps are reinforced with webbing sewn along the edges of the tarp.

Patented
Ground Operated Tied Down System for fast deployment.
Patent # 5,697,664

Flaps
Used for maximum load coverage and to extend tarp life.

Wear Patch
40 oz. Tarp Patch to reduce wear and tear.

Straight Tarp

Simply the Best!

Tarp Manufacturing

Our tarps are Simply the Best because all are cut using a state of the art CNC cutting machine. This means whether you are ordering a straight tarp or a flap tarp, it will be cut to your exact specifications. All tarps are double stitched using Lock Stitch sewing machines, versus chain stitching, preventing the stitching from unraveling. All mesh tarps have heavy duty webbing sewn down the length of each side to prevent wear and tear along the edges.

Each tarp is individually numbered and kept on file to make reordering a breeze.

Pulltarps Tarps

Our tarps for semi-automatic pull out style tarps have a 40 oz. wear patch at the back where the tarp comes in contact with the tailgate. This helps make the tarp last much longer than other brands of tarps. These tarps also use a hem tube sewn in each end to attach the tarp to the roller tube at the front and the pullrod at the rear.

Arm System Tarps

Pulltarps Arm System tarps have a hem tube at the tailgate end that is part of our exclusive Double Wrap Teardrop Technology. The tarp slides into the groove in the Teardrop Pullbar and then the tarp is given a full wrap around the pullbar. This prevents the tarp from bunching and pulling to the center of the pullbar. Urethane Teardrop bumpers on each side of the tarp protect and quiet the entire system.

New!!

Cable System Tarps

Our Cable System tarps feature premium 18 oz vinyl or heavy duty mesh fabrics. Mesh tarps have 2" wide heavy duty webbing sewn the full length down each side. The tarps include bow pockets for added strength and longer wear. Our Cable System tarps make great replacements for any brand of tarp system. A 14" straight rear flap is standard on our Cable Systems unless ordering a rear closer.

Tarp Fabrics

Heavy Duty Mesh

Our high quality vinyl coated polyester mesh fabrics have an open weave design that allows wind to pass through and decreases flapping. Mesh fabric is perfect for covering sand, rock, aggregate and trash. Not recommended for asphalt. Available in Black, Red, Blue or Green.

Asphalt Material

The best 400 degree rated tarp material available. This 14 oz. material is waterproof and has a special urethane coating on both sides that gives it the 400 degree rating. The tarp helps keep the asphalt hot and is super slick so asphalt doesn't stick to it.

18 oz. Waterproof Vinyl

Seamless full width tarps are made from 18 oz. Waterproof Vinyl. This 18 oz. Vinyl is available in 5 different colors; black, gray, red, blue and green. This material is recommended for Super Slider Cable systems.

13 oz. Super Heavy Waste Mesh

Super Heavy Duty mesh tarps that are great for rolloffs, hook lifts, and lugger box applications. The tarp is made of 13 oz. Heavy Weight woven mesh with UV protection and 7 x 7 weave breathes to reduce flapping. Double lock stitching for extra strength and durability.

Side Flap Tarps

For Pulltarps[®], Electric Pulltarps[®],
Manual & Automatic Arm Systems

Side Flap Tarp

Our Side Flap tarps provide maximum coverage. The tie down ropes are attached to the middle of the tarp, so when you pull the tie down rope from the back it will cause the flap to flip up on top of the tarp. The front of the flap is tapered so the tarp rolls up neatly on the roller. The design is so unique it's actually patented.

Patent # 5,697,664

Simple Operation

Our Side Flap systems are ground operated. They can be deployed in approximately 3 minutes and un-tarp in about 2 minutes. Our Side Flap and Tie Down system will stop the tarp from flapping in the wind, increasing the life of your tarp and keeping your load completely covered.

Waterproof Vinyl Flap Tarps

Waterproof Side Flap Tarps are one piece from flap to flap and front to back. NO SEAMS sliding back and forth across the load.

Step 1.

Uncoil the rope from the rope storage hooks and pull the tarp out over the body, then tie off.

Step 2.

Release tie down ropes from the snap clip on the pullrope. Flip the tie down rope over the corner of the body.

Step 3.

Using the flap hook provided, pull the flaps down along the side of the body.

Step 4.

Starting from the front, pull the tie down rope under the body hooks.

Step 5.

Pull the tie down rope tight at the rear and secure with the attached bungees. Repeat steps 3-5 on the other side.

Step 6.

Finish by wrapping the pullrope around the storage hooks at the rear. Secure the pullrope with the attached bungee.
