Full Trip Reversible

Q: When would I use a full trip reversible straight blade plow?
A: This plow is used for municipal, commercial, airport and off road plowing. Our most versatile, general purpose snowplow. Full trip is when the cutting edge hits an immovable object no higher than the center of the moldboard hinge pints and the whole moldboard moves forward until the cutting edge goes past center and slides over the object. The dual compression trip assemblies return the plow to plowing position once the obstacle is cleared.
